THE PROBLEM

Using buses, especially older ones, can be quite confusing and terrifying for those of a younger generation. While they can eventually learn it by themselves or through the help of others, it can still be quite confusing for a first-timer.

We want to make it so that navigating through bus routes and schedules can be much, much more convenient for someone who's new to this. So that those of the younger generations will be able to get access to a cheaper way of transportation more conveniently, and understandably.

The solution is simple: we will build an app that will show the user the closest bus stop, show the bus schedule of that area, show the location of any buses that are approaching the bus stop, and notify the user of arriving buses as well.

Reachable Users

Kyaw Zin Lin

Phone: 0825721717

Email: ginkelbin11@gmail.com

When

Mon, Wed: 10.30 - 17:00

Tue, Thu - Sun: 10:30 - 17:00

Kongpop Wechvitan

Phone: 0982847151

Email: kiranaa1968@gmail.com

When

Mon, Wed: 15:00 - 23:00

Tue, Thu-Sun: 12:00 - 23:00

Kasidate Krongsawatkul

Phone: 0894477050

Email: kasidatesongxd@gmail.com

When

Mon, Wed 8.30 - 15.20

Tue, Thu-Sun 10.00 - 17.30

MVP Shape:

FR - 1 Get the user's current location *Persist through sessions?*

FR - 2 Show nearby bus stops

FR - 3 View bus routes

FR - 4 Show the location of any bus that is approaching the bus stop

FR - 5 Notify when a bus should be arriving

ACCESS:

GTFS (General Transit Feed Specification) - An open data standard used to distribute relevant information about transit systems to riders.

Mobility Database - An open data catalog including over 6000 GTFS, GTFS Realtime, and GBFS feeds in over 99 countries.

SDLC: Agile Model

For our first ever project in software engineering, we feel that the Agile Model would allow us to have much more flexibility in our work.
